911 EMERGENCY ROOF PATCH

PRODUCT DESCRIPTION:

DEWITT'S 911 EMERGENCY ROOF PATCH is a natural mineral compound that expands into a gel instantly, upon contact with water, to make a temporary, leak-proof seal for flat built-up roofs. It is the perfect product for sealing leaking roofs in inclement weather. DEWITT'S 911 EMERGENCY ROOF PATCH can be applied even in pouring rain and will move through standing water to stop leaks in minutes. No special equipment is required for handling or pouring. It is non-polluting and will not support flame.

USES:

DEWITT'S 911 EMERGENCY ROOF PATCH may be used on any flat roof. (schools, factories, apartments, malls, hospitals, institutions, etc.)

APPLICATION:

Pour DEWITT'S 911 EMERGENCY ROOF PATCH directly from pail into a ½" layer over suspected area of the leak. If the leak does not stop within a couple of minutes, pour additional DEWITT'S 911 EMERGENCY ROOF PATCH. As long as the DEWITT'S 911 EMERGENCY ROOF PATCH stays wet it will continue to seal the leak. When the roof is dry, sweep up the residue and make permanent repairs.

WARNING:

DEWITT'S 911 EMERGENCY ROOF PATCH becomes extremely slippery when applied to any surface upon contact with water. Use great caution in moving about. Do not place ladder or tools on the roof area when DEWITT'S 911 EMERGENCY ROOF PATCH has been applied. Be sure to remove residue from the roof before making permanent repairs. Water can reactivate the material to again become extremely slippery.

COVERAGE:

Covers approximately 50 sq. ft.

PACKAGING:

3.5 gallon plastic pails (25 lbs)

CAUTION:

Avoid breathing dust or contact with eyes. Do not take internally. Close container when not in use. Keep away from children.
